

“WPFunnelDeliveryAIO” WordPress Plugin

User Manual

THE FOLLOWING TERMS AND CONDITIONS APPLY:

While all attempts have been made to verify information provided, neither I, nor any ancillary party, assumes any responsibility for errors, omissions, or contradictory interpretation of the subject matter herein.

As the FTC Rules requires, we do not guarantee or imply that by using this tool, you will get rich or make money at all.

Software and associated files is distributed as is without any warranty of any kind, either express or implied.

Software and associated files is not freeware or shareware.

Selling or distribution of the code (in whole or in part) of this program without prior written consent is expressly forbidden.

Installing The Plugin.

Installing the plugin is like installing any other WP plugin.

Step 1: Go to the "Plugins" section and click.

Step 2: Click "Add New" and Upload the included zip file.

Step 3: Activate it.

----- Intentionally Left in Blank -----

Plugin Overview

The plugin allows you to create a single page for your whole sales funnel.

Yes, instead of having to duplicate your download pages for all the possible combinations that your sales funnel may have, with our software you only create a single download page and that's all.

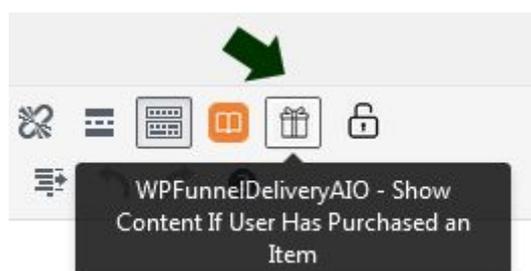

In addition to this, it allows you to protect your whole page with a password of your choice.

Using The Plugin.

Using the plugin is really easy. Take a look:

Step 1: Create a New WordPress Page (or Post) for Your Download Page:

Step 2: Start Adding Your Download Links

Here for example, we're adding the tag 'mainproduct' to the content that we'll add (which will allow the user to download our main product).

The diagram shows a white rectangular box representing a code block. At the top left, there is a dashed red box containing the code `[showfor pmval='mainproduct']`. In the center, the text **Download Product XYZ** is displayed in a large, bold, orange font. Below this, in a smaller black font, it says "This file includes: Plugin and User Manual." At the bottom left, there is another dashed red box containing the code `[/showfor]`. To the right of the code block is a large, red, curly bracket that points to the text on the right. The text on the right reads: "Here We're Tagging The 'Main Offer' Download Area With the 'mainproduct' tag."

The diagram shows a white rectangular box representing a code block. At the top left, there is a dashed red box containing the code `[showfor pmval='myoto']`. In the center, the text **Download Product JVV PRO** is displayed in a large, bold, orange font. Below this, in a smaller black font, it says "This file includes: Plugin and User Manual." At the bottom left, there is another dashed red box containing the code `[/showfor]`. To the right of the code block is a large, red, curly bracket that points to the text on the right. The text on the right reads: "Here We're Tagging The 'OTO Upsell' Download Area With the 'myoto' tag."

Comment: You Can Add as Many Tags as You Need For Your Whole Funnel.

Step 3: Pass Your Tags in the Url

Pass Your Tags in The Url....and You're Done!

Once you have "tagged" the content of your "Thank You" page, you can easily create "virtual" thank you pages for your whole funnel, by passing parameters to this page through its url.

Step 3: Pass Your Tags in the Url

`http://yoursite.com/yourdownloadpage/?pmval=mainproduct`
(This will show the download links for the main product).

`http://yoursite.com/yourdownloadpage/?pmval=mainproduct_myoto`
(This will show the download link for the main product + the download link for the oto - we have 2 tags).

Comments:

* You need to replace <http://yoursite.com/yourdownloadpage/> with the full path to your download page.

* You need to add this url to your sales platform where you have your order buttons configured (PayPal, ClickBank or any other).

Password Protecting Your Whole Page

Here's another feature that you can use to protect your whole download page.

By using this feature, a valid key has to be passed to your download page and if that key is not valid or not present, **the access to the page will be blocked** (the visitor will be redirected to your WordPress homepage).

To use this feature, click this button and enter a key to protect the page...

This will insert a shortcode.

To get access to the page you will now need to pass this parameter to your website url:

?pagekey=**yourprivatekey**

Example:

<http://www.yoursite.com/?pagekey=yourprivatekey>

If you want to combine the “WP Funnel Delivery AIO” tags with the page protection, you need to add this at the the end of the url:

&pagekey=yourprivatekey

Example:

?pmval=myproduct**&pagekey=yourprivatekey**

Of course, you need to replace “yourprivatekey” with your private key.

That’s all!
