"Content Magic"
User Manual

THE FOLLOWING TERMS AND CONDITIONS APPLY:

While all attempts have been made to verify information provided, neither I, nor any ancillary party, assumes any responsibility for errors, omissions, or contradictory interpretation of the subject matter herein.

As the FTC Rules requires, we do not guarantee or imply that by using this tool, you will get rich or make money at all.

Software and associated files is distributed as is without any warranty of any kind, either express or implied.

Software and associated files is not freeware or shareware.

Selling or distribution of the code (in whole or in part) of this program without prior written consent is expressly forbidden.

We're not responsible for the content that you use and what you do with it.

Introduction

"Content Magic" is a Windows software that allows you to make your PLR articles unique (up to 90% or more) with just one click.

To do this, the software uses a special HTML encoding that will make your articles look and read just like the original, but will look unique to different content bots.
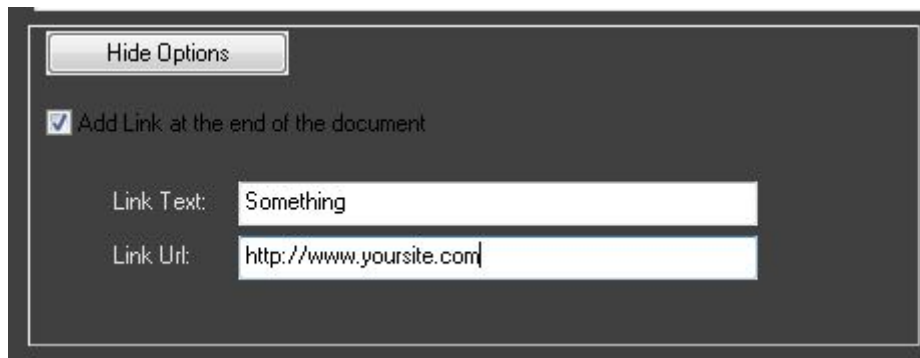

How to Use The Software

Using the software is really easy. Just paste your content inside the "Original Content" box, click the "Pass Content" through the software, wait some seconds and the modified article (right area of the screen).

The article will look as the original, but will be different for content bots.

Comment: If you clock the "Show Options" button, you'll see an area like this one, from where you can add a link to the final article.

```
Hide Options

☑ Add Link at the end of the document

   Link Text:   Something

   Link Url:    http://www.yoursite.com
```

This is good to get backlinks to your website if you plan to submit the articles to external websites / blogs (something that's recommended).

Important:

The software should be used with content that you own (for example, PLR articles that you've purchased etc).

Each article should have no more than 1500 words (in general PLR articles have between 300-500 words so you'll be more than fine).

Using the Content to Get Backlinks (and Visitors) To Your Websites.

It's recommended to use the content that you pass through the software on external websites (there are 100's of free websites or free blogs where you can publish them).
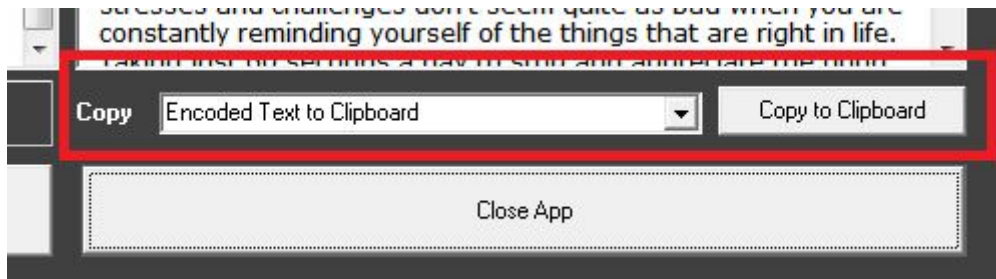

This is a good strategy that you can use to get backlinks and visitors to your Websites (we recommend you to not use this content on your own domains or money sites - this is to stay on the safe side with search engines).

# Analyzing the Content with Online Tools

There are many online tools that can help you to analyze if a content looks duplicated or not for content bots.

One of them is https://plagiarismdetector.net/
(free up to 25K words - enough for us).

To analyze the content, first copy the content to the clipboard using this button...

Then paste it inside the text editor...

... click "Check Plagiarism" and wait some seconds.

Once that the process has finished, you'll be able to see something like this...

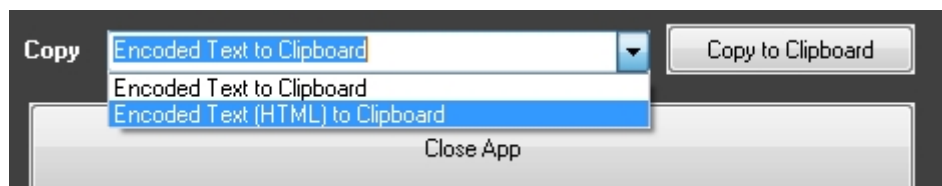

... Indicating how "Unique" is your article.

Anything above 85% is fine (if you don't get something above 85%, you could pass the content again through the software).

Comment: In most of the cases, you'll achieve numbers like this but in rare ocassions that number may not be reached.

Finally, there are some websites where the published articles do not render well. If this is the case (and the website allows you to enter HTML code), then you could try using the HTML version of the article...

That's all!
