# Introduction

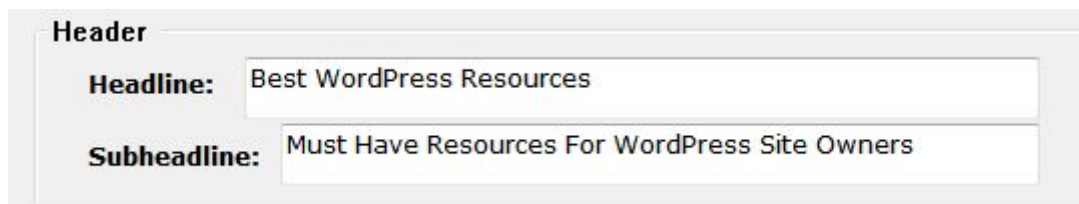

“InstantCheatsheets” is a Windows software that allows you to easily create cheatsheets in .pdf format with just a few clicks of your mouse.

## How to Use The Software

### Step 1: Prepare Your Header

To do this, simply add a Headline and Subheadline. For example:

The screenshot shows a form titled "Header" with two input fields. The first field is labeled "Headline:" and contains the text "Best WordPress Resources". The second field is labeled "Subheadline:" and contains the text "Must Have Resources For WordPress Site Owners".

### Step 2: Add Resources (Links) to Your Cheatsheet.

You can manually enter your links (this is good to recommend specific websites or affiliate offers)

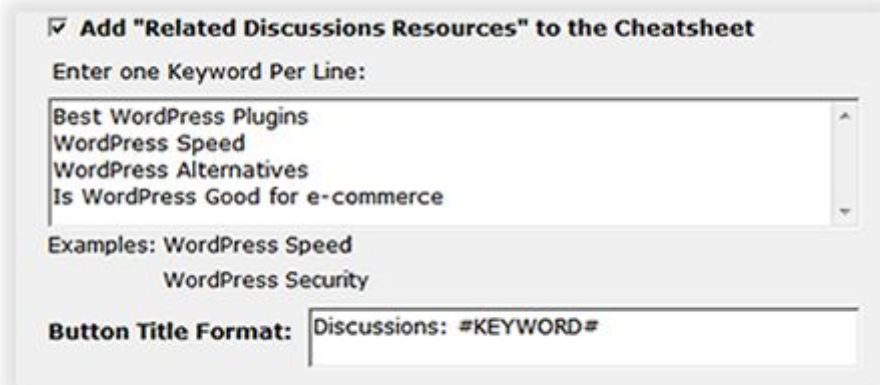

The screenshot shows a form titled "Cheat Sheet Resources". It has two input fields: "Link Text:" with the value "Best WordPress Theme Creator" and "Link Url:" with the value "http://www.somelink.com". To the right of these fields is a blue button labeled "Add Resource". Below the input fields is a section labeled "Resources:" with a blue link that says "Add Resources Automatically". Below this is a large text box containing the text "(Your Links will be added to this list.)". At the bottom of the form are two buttons: "Remove Selected Resource" and "Remove All the Resources". At the very bottom, there is a checked checkbox labeled "Add Text Below Each Resource:" followed by a text input field containing "CTRL + Click: Opens the Link in a New".
