We're not responsible for the content that you use and what you do with it. We do not make recommendations for which kind of content can be used or not.

The creators and sellers of this software, have no relationship with Google LCC or YouTube.

Introduction

Niche Cheetah is a software that allows you to create responsive websites for any niche with just some clicks. Here's a screenshot of it.

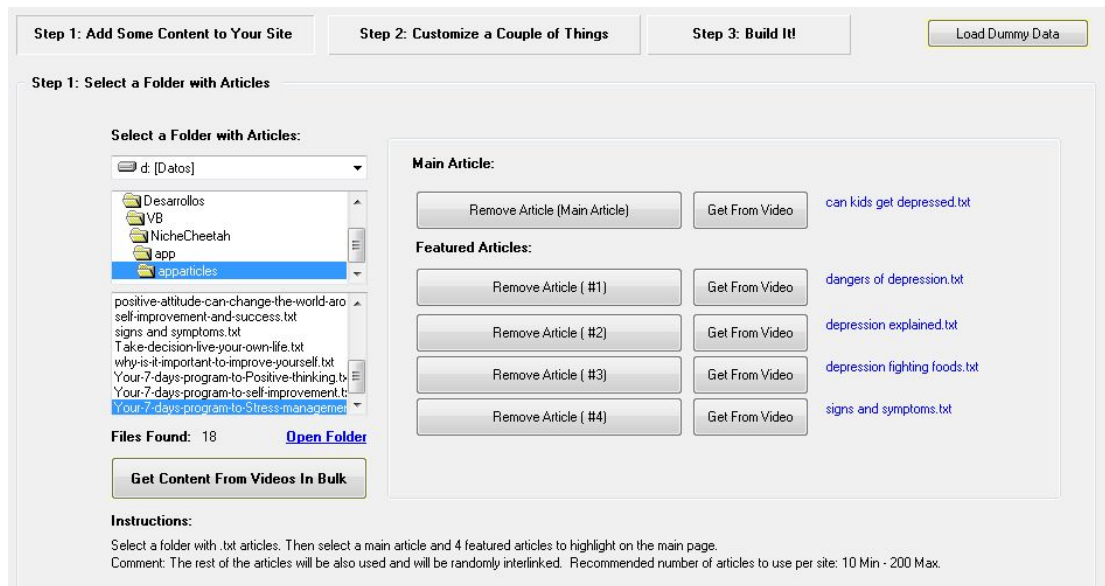

Using it it's really easy (just fill in the blanks), later we'll get into its details but now we'll quickly create our first website for testing purposes to see how everything works.

Creating a Demo Website with 1 Click.

To create a demo website, just click the following button:

After this your screen will look like this...

Basically, the software did the following tasks for our “Demo” website:

- 1) Selected a Folder with 18 Articles that come preloaded with the software
- 2) Selected the “Main” article and 4 featured articles.
- 3) Selected an image (from some that also come preloaded). (TAB 2),
- 4) Entered some info about the website (TAB 2).
- 5) Entered the details of an Ad (TAB 2).

Remember, you can use your own information but we’ve added this “Demo” info so you can quickly test how the software works.

Customizing Your Website

From this tab, you can enter the details of your website (name, custom image) and configure an ad to monetize your content (you can link this ad to your own offers, affiliate offers etc)...

Step 2: Customize a Couple of Things

Generating the Website

Finally, from this button you can generate your website.

Step 3: Build It!

Pro Version

In the “Pro” version, you have the option to rewrite each one of your articles with 1 click from here...

Rewrite Articles (PRO Version Enabled)

Rewrite Articles (takes longer but it's recommended if you are using PLR articles).

Comment: This option won't alter your original articles.

Build Site **Open Output Folder**

This is recommended if you're using PLR articles or articles that you've already uploaded to other websites before.

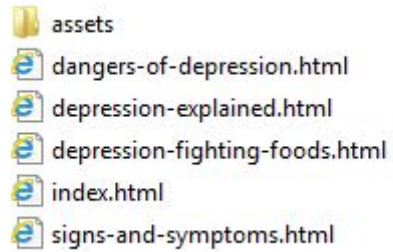

Comments:

- This option won't alter your original files.
- If you enable this option, the website creation process will take a little bit longer. For example, creating a website with nearly 50 pages, may take 3-5 minutes to process (on average), but still with this you'll save a lot of time.

Once it finishes, you'll be able to see the website by clicking the following button:

Open Output Folder

Here's an example of what you can see:

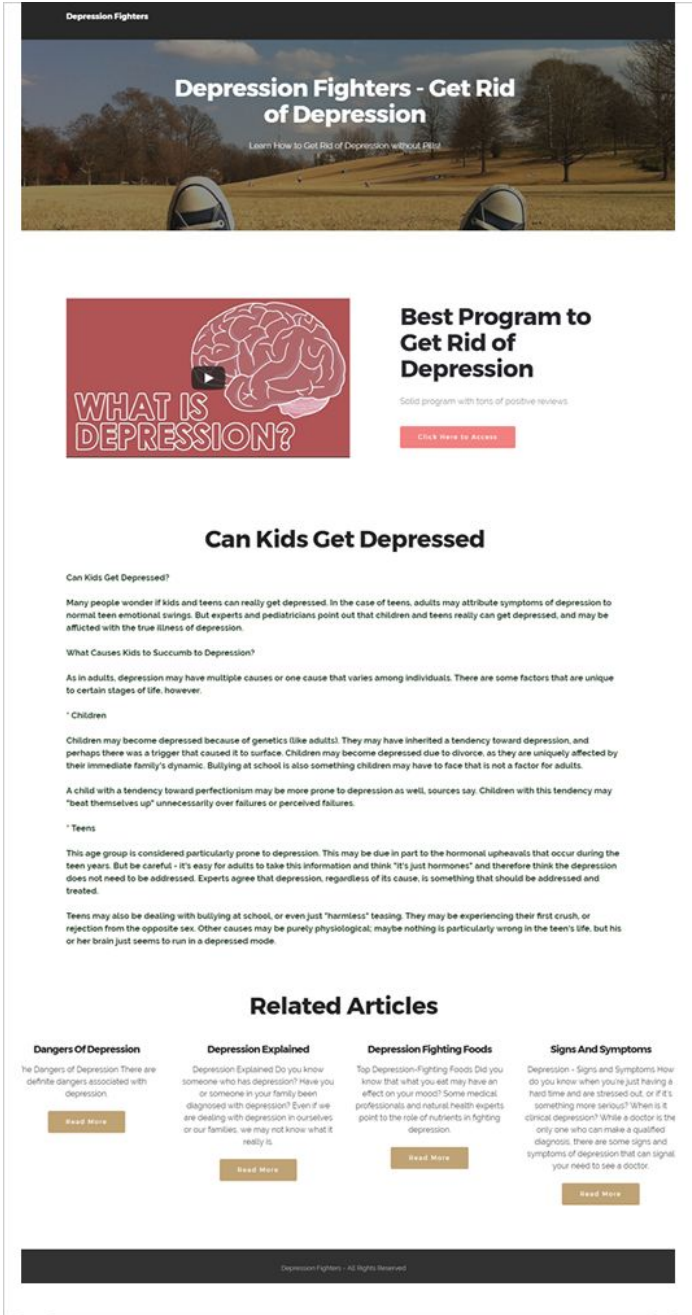

These are all the files that belong to the website.

You can see how your website looks like by making a double click to the **index.html** file.

Tip: If you have different browsers prefer to see it with one in particular (Google Chrome etc), make a right click over “index.html” ---> open with ---> (Select Your Browser).

Below you can see how your website looks like and its sections

(main article, ad spot, related articles):

Header with Parallax Effect

You can use a custom image and text.

Ad Spot

If you want, you can also show a YouTube Video (great to pre-sell a product).

You can link a button to any url of your choice (your offers/affiliate offers etc)

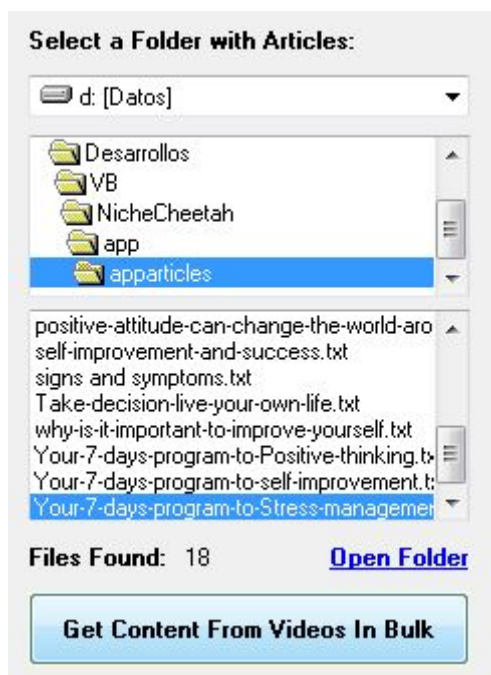

Main Article

Link to Related Articles

Footer

Adding Content to Your Website.

To add your own content, just go to “Step 1” and use the navigator to select the folder with articles (a folder with articles in .txt format).

All the articles from this folder will be added to your website.

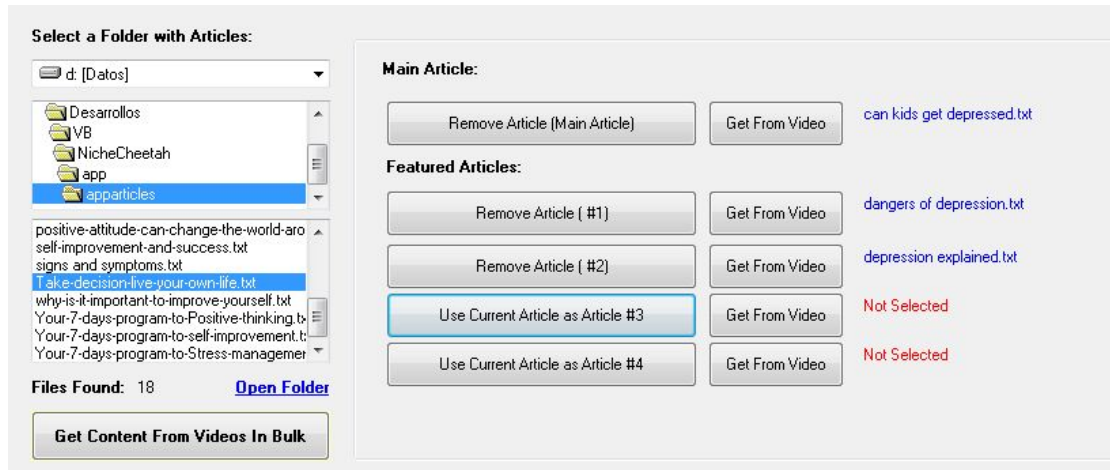

We recommend you to work with a folder with 10 or more articles (up to 200 is ok - can work with more depending on your system resources),

After selecting this folder, you need to select 5 articles for the home page (a main article and 4 featured articles).

Here are the steps to select these articles:

Step 1: Select an article from the list and then click “Use Current Article...”.

Step 2: Do this until all the articles get selected.

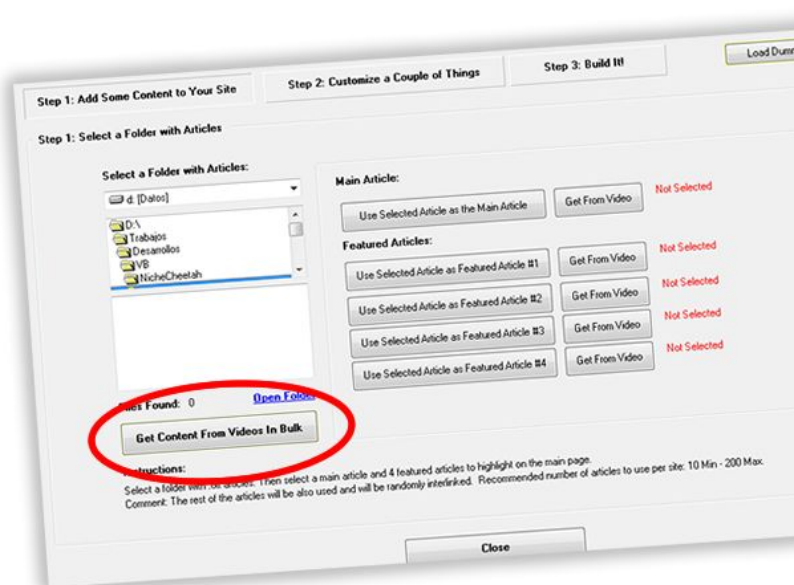

If you want to remove an article (to use another one), just click a “Remove Article...” button

Adding Content From YouTube Videos.

NC also allows you to get content from YouTube videos that have subtitles (CC’s). That content of each video will be saved as a .txt article.

To get content from multiple YTB url’s you can use the following button:

Then enter the Video URL's (one per line) + a title of your choice for each video.

The screenshot shows a software window with the following elements:

- Header:** "Enter Video Url's Below (One Per Line)"
- Input Field:** A text area containing six YouTube URLs, highlighted with a red box:
 - https://www.youtube.com/watch?v=4qsrhv7cUTU
 - https://www.youtube.com/watch?v=HxKupSNMPIE
 - https://www.youtube.com/watch?v=oL33qaSmSHw
 - https://www.youtube.com/watch?v=K-a_dBOI-J4
 - https://www.youtube.com/watch?v=mTerH2itnFg
 - https://www.youtube.com/watch?v=-6nsO9fdLrA
 - https://www.youtube.com/watch?v=rTaqixKEEgY
- Header:** "Enter a Title For Each Article (Converted Video) Below (One Per Line)"
- Input Field:** A text area containing several titles, with the "Generate Titles" button circled in red:
 - Forex and you
 - MT4 Indicators? Read this before
 - Interesting things that i've found about MT5 Indicators
 - 4 interesting things about Making Money with Forex
 - Best Forex Trading Resources
 - Free Harmonic Trading Tips
 - MT4 Indicators - Valuable Tips
- Buttons:** "Generate Titles" (circled in red), "Ok", and "Cancel".

If you don't want to waste your time entering titles, you can try the "Generate Titles" button to construct some random titles on the fly (tip: you can modify the generated titles if you want to).

Then click "Ok" and the software will get the content of each video and will save it as a .txt file using the "Title" that you've entered as the filename.

Here's an example of a url:

<https://www.youtube.com/watch?v=mNPRaSeosgM>

Comment: Before using the "Bulk" feature, we recommend you to make a quick test with the individual content downloader (more details below).

In addition to the “Bulk” feature, you can get content from videos one by one by clicking the “Get From Video” button, which will present you some extra features (like allowing you to save content available in different languages).

Main Article:

Remove Article (Main Article)	Get From Video	can kids get depressed.txt
-------------------------------	----------------	----------------------------

Featured Articles:

Remove Article (#1)	Get From Video	dangers of depression.txt
Remove Article (#2)	Get From Video	depression explained.txt
Use Current Article as Article #3	Get From Video	Not Selected
Use Current Article as Article #4	Get From Video	Not Selected

Getting Videos with Subtitles

To look for videos with Subtitles, we recommend you to use the YouTube Filter and select videos with “Subtitles / CC” and videos licensed under “Creative Commons” as a basic filter.

The screenshot shows a YouTube search interface with the search term "what is condensed milk". A "FILTER" button is highlighted with a green box. Below the search results, a table lists various filters. The "Subtitles/CC" and "Creative Commons" filters are also highlighted with green boxes. The "Creative Commons" filter has a small "x" icon next to it, and a "Remove" button is visible at the bottom right.

UPLOAD DATE	TYPE	DURATION	FEATURES
Last hour	Video	Short (< 4 minutes)	Live
Today	Channel	Long (> 20 minutes)	4K
This week	Playlist		HD
This month	Movie		Subtitles/CC x
This year	Show		Creative Commons x

Comment: This is a proposed filter. As a formal disclaimer, we're not responsible for the content that you use and what you do with it.

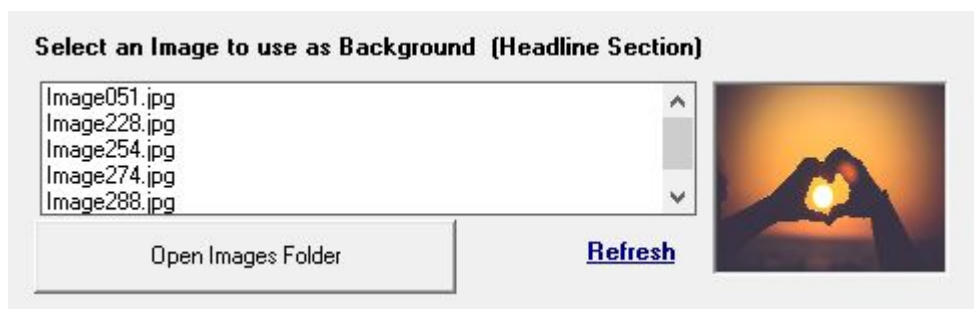

Customizing Other Things

Selecting an Image for your website (Tab 2):

Each website can use an image that will be visible in the header section as you can see below:

Changing this image is very easy: Just select an image from the list and that's all.

If you want to add your own images, please click the button "Open Images Folder" and paste your images there. Then click the "Refresh" option so you see the images that you've added.

General Site Info:

Here's the "General Site Info" section:

Site Name:	Depression Fighters
Site Headline:	Depression Fighters - Get Rid of Depression
Site Description:	Learn How to Get Rid of Depression without Pills!
Site Footer Text:	Depression Fighters - All Rights Reserved

And here you can see how these sections look like inside of the website:

(For spacing reasons, the footer text is not visible here).

Ad Spot:

From here you can setup an ad that it will show on every page of your website. You ad can link to an affiliate offer, to another website that you own, to a client website etc.

Ad Spot Use it to Promote Your Products, Affiliate Products etc

Ad Title:

Ad Description:

Button Text:

Link Button to:

YouTube Video id: Leave it empty to not use video.

In the following example, the video ID is the part of a YouTube url that you see in Blue: <https://www.youtube.com/watch?v=0tek2aa8hAQ>

Tip: You can use a Video Promo to Pre-Sell a Product

Here's how an ad spot looks like:

If you want, you can show a youtube video next to your add (great to pre-sell something) and it's also good to make your websites look more better.

If you use a YouTube video, it will only be visible in the home page of your website (the rest of the pages won't show it).

If you don't want to show a YouTube video, just leave the "YouTube Video id:" field empty.

Uploading Your Websites:

You can upload your websites to any hosting provider, free or paid.

If you upload it to a free hosting provider, in most of the cases you won't need to register a domain name as the free hosting provider will create a subdomain or subfolder for you.

Something like:

yourusername.freehostingurl.com

Or

Freehostingurl.com/yourusername

Here's a list of some free web hosting providers that may help (please check them as some of them may interrupt their services).

- <http://www.Freehosting.com>
- <https://www.5gbfree.com/hosting-plans/>
- <https://byet.host/free-hosting>
- <http://freehostingnoads.net/webhosting.php>
- <https://freeho.st/client/cart.php>

Please look for a service that provides "FTP" (so you can easily upload your website through an FTP software).

If you have your own domain + a paid hosting, you're surely familiar with these things.

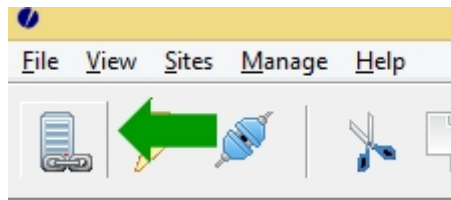

Once you have a hosting account (free or paid), it's time to upload your website to the web.

If you don't have an FTP client, i recommend you CoreFTP (but you can use others of course).

You can get it from this url (the Free version is ok):

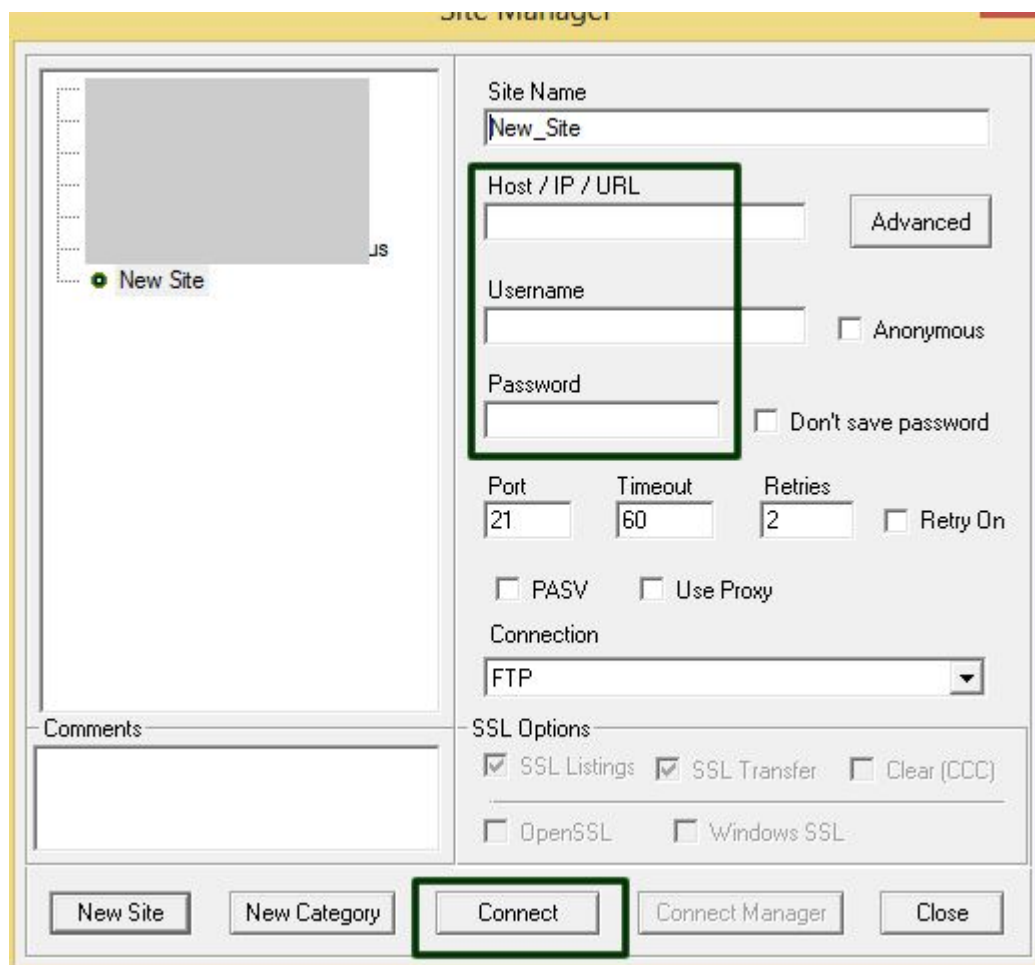

<http://www.coreftp.com/download.html>

After installing it, click the "Site Manager" button.

From the site manager you can keep the FTP info of all your websites (if you have many).

Once you click it, you'll be able to enter the info of a new website:

Basically, you'll enter 3 values:

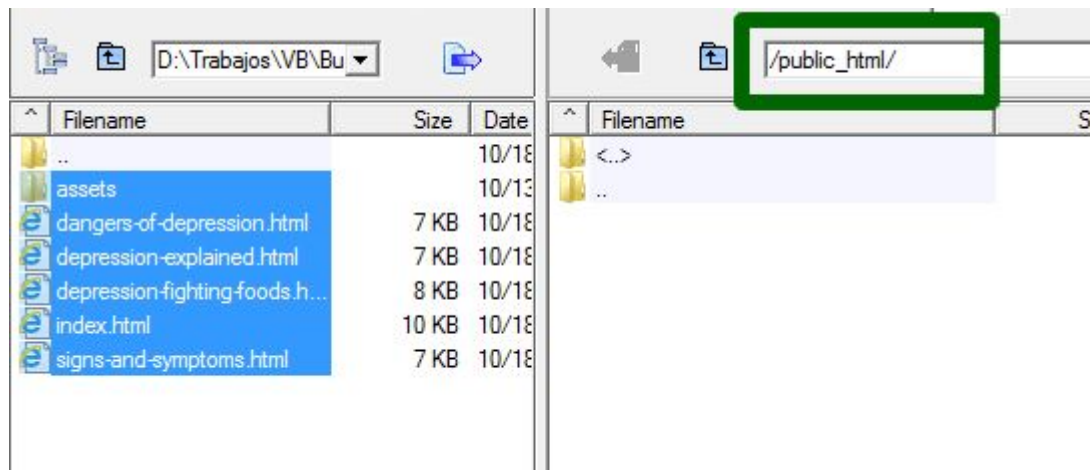

Host
Username
Password

Your web hosting provider will give you this info. If you didn't receive it, please contact them requesting it (tell them that you need the FTP login details: Hostname, User & Pass).

After entering this info, click “Connect”.

After connecting... the right panel will show the folder of your website. You should see a folder named “**public_html**” . Make double click so you get inside of it.

Once you’re inside of it it will show this way....

Now, the left panel represents your computer. You need to go to the folder that has the website that has been generated by the software (you can paste the location in the location bar or you can use browse it).

Once you’re inside of it, select all the files as you can see in the picture (you can click the first item, then press “SHIFT” and click the down button until all the items are selected).

Once all the items have been selected, drag and drop them to the right panel.

Common Issues

Problem: The software is not getting content from videos (files are not being saved).

Possible Solution:

Instead of using the “Bulk” feature, try with a single video clicking the “Get From Video” button...

Then enter the Video ID. Below (in yellow), you can see the video id of a youtube url.

<https://www.youtube.com/watch?v=mNPRaSeosgM>

When entering the ID, make sure that it has CC's.

If the video has CC's and you're not getting it under the software, then your firewall may be blocking the port 80 (which is required by the app to get content from the web).

If you can't get a list of available languages and you've applied the solution described before, please enter "debug" without quotes as video ID, press "Enter" and follow the instructions.

Problem: I select a language but there's no content available for it.

Possible Solution: Sometimes you may experience something like this and is not an software issue. We recommend you to try with another language or video.

That's all!
