

“The Trading Box”

Trading Indicator

Disclaimer: As The FTC Rules Require, We Want To Let You Know That Results Are Not Typical. We Obviously Don't Guarantee or Imply That By Using Our Software You Will Get Rich or Make Any Money At All. We're not responsible for the way you use this plugin. And That Your Income or Results, if Any, Will Vary.

Forex Trading has large potential rewards, but also large potential risk. You must be aware of the risks and be willing to accept them in order to invest in the Forex market. Don't trade with money you can't afford to lose. This ad/presentation is neither a solicitation nor an offer to trade Forex. No representation is being made that any account will or is likely to achieve profits or losses similar to those discussed on this ad/presentation. The past performance of any trading system or methodology is not necessarily indicative of future results.

Forex is a challenging and potentially profitable opportunity for educated and experienced investors. However, before deciding to participate in Forex Auto Trading, you should carefully consider your investment objectives, level of experience and risk appetite. There is considerable exposure to risk in any foreign exchange transaction. Any transaction involving currencies involves risks including, but not limited to, the potential for changing political and/or economic conditions that may substantially affect the price or liquidity of a currency. Moreover, the leveraged nature of FX trading means that any market movement will have an equally proportional effect on your deposited funds. This may work against you as well as for you. The possibility exists that you could sustain a total loss of initial margin funds and your position will be liquidated and you will be responsible for any resulting losses. Investors are recommended to lower exposure to risk by employing risk-reducing strategies such as 'stop-loss' or 'limit' orders. This website and/or the developer of this indicator will not be held responsible for the reliability or accuracy of the information available on this ad/presentation. The content provided is put forward in good faith and believed to be accurate, however, there are no explicit or implicit warranties of accuracy or timeliness made by us.

We assume no responsibility for errors, inaccuracies or omissions in these materials. We shall not be liable for any special, indirect, incidental, or consequential damages, including without limitation losses, lost revenues, or lost profits that may result from these materials.

Getting Ready to Use the Software

The software (indicator) works with Metatrader 4 (a free and popular software, which works with almost any forex broker).

Comment: If you have already installed MT4, you can skip this section.

If you don't have it, you can get a free copy from a broker.

Here's a link:

<https://www.liteforex.com/downloads/mt4/>

When clicking the download button, you'll have the option to create A demo account so you can trade with Virtual money (no risk).

It's always recommended to get started with a "Demo Account" first.

Tip: Below You'll Learn How to Create a "Demo Account" without having to create an account with a broker.

Comment: The previous link will allow you to get a MT4 copy from a broker (LiteForex). Please notice that we're not recommending any broker in particular, and you can get your copy from any other broker but it needs to be done from a broker.

Once you have your MT4, you can later connect it with any other broker of your choice.

Need a Demo Account? Create One in Under 1 Minute.

To create a demo account, just open Metatrader 4, go to the left panel, and make a right click on "Accounts".

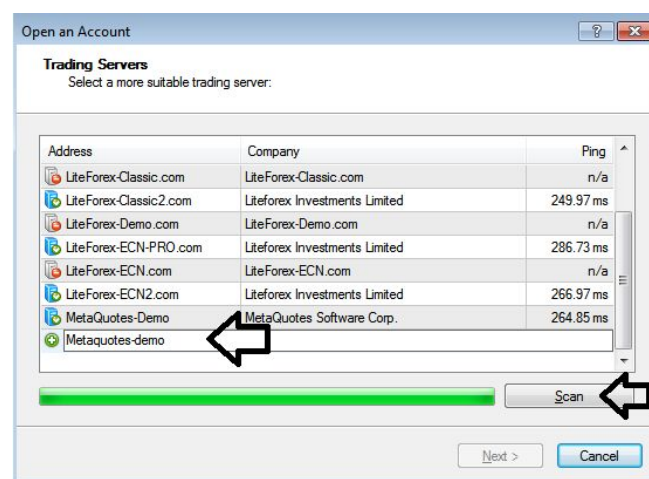

Then click "Open an Account"...

Then click here...

Search for "MetaQuotes-Demo"...

Comment: Metaquotes is the company who developed MT4.

If you have any issue with the demo account creation through Metaquotes, you can create a MT4 free demo account from any broker of your choice (you can google "Free Metatrader 4 demo account" and you'll find multiple alternatives).

Once that it finds the server move to the next step.

Then select "New Demo Account"...

... add your details and that's all.

Installing "The Trading Box"

Once you've installed Metatrader 4....

- 1) Open your MT4 platform
- 2) Click the "File" menu -> "Open Data Folder". You'll see a folder called MQL4.
- 3) Open it. Inside you'll find a sub folder called "Indicators".
Open this folder and paste the indicator right there.
- 4) Restart MT4.

Adding the Indicator to Your Chart

1) Click the "View" menu -> "Navigator" (CTRL + N).

Go to the indicators menu and you'll quickly see the indicator.

2) Make double click on it and you'll be adding it to your active chart.

Comment: The Indicator will work with the following pairs:

- USDJPY
- EURUSD
- EURGBP
- USDCHF

Using the Indicator with a Metatrader 4 Template:

The indicator should be added to a chart as it has been described before. If you have some experience with Metatrader 4 and create a template that uses the indicator, you may experience that (after loading the template), the indicator does not appear.

To fix this, just move to another timeframe and then go back to the timeframe of your choice.

How to Use The Indicator to Look For Opportunities

The following examples will show you how to use the indicator.

Looking For "Bearish" Opportunities

*** The Software Will Draw the Complete Pattern For You! ***

The Bearish "Trading Box" Pattern Consists of:

- 1 A Double Top Pattern.**
In the example, we see a Double Top Pattern that shows that we're having a Strong Resistance Level. Something that's Good.
- 2 Entry Signal (The Price Breaks the Red Line).**
Once that we have the alert (the double top pattern), we need to wait for the entry signal (the price has to break the red line).
- 3 A Target Line.**
The second line (the lower line of the box) will act as the target line.

Setting Your Stop Loss: You could use the upper line (+ some extra pips), to set your stop loss.

Comment: Please notice that we're considering a pattern that follows the direction of the previous trend (downtrend).

It's always recommended to follow the trend.

Looking For "Bullish" Opportunities

And Now We'll See an Example of a "Bullish" Pattern:

The Bullish Pattern Consists of:

1

A Double Bottom Pattern.

In the example, we see a Double Bottom Pattern that shows that we're having a Strong Support Level. Something that's Good.

2

Entry Signal (The Price Breaks the Blue Line).

Once that we have the alert (the double bottom pattern), we need to wait for the entry signal (the price has to break the blue line).

3

A Target Line.

The second horizontal line act as a target line (which has been reached). You could use the double bottom line as Stop loss.

Tip: It's always a good idea to analyze different timeframes (for example H1 and H4) to see where things look better (you find a pattern that looks solid). If you can't find nothing interesting, it's better to move on to another instrument.

Target Levels: The indicator shows potential targets levels (Take Profit and Stop Loss), but these levels are to be used as an orientation only (feel free to use your own target levels).

Aggressive Entries:

In the previous examples, we've seen that entries were considered after the price crossed the inner line (crossed the red line for a bearish entry or the blue line for a bullish entry).

If you're confident with the structure that you see, you could use the color changes as an entry point.

For example, a bearish entry point could be considered after you see a double top and the inner line changes from blue to red (even if the price didn't cross the red line).

This is up to you and as usual, it's strongly recommended to make your tests on a demo account first.

Important: *You can't win all the trades with this software (no tool can give 100% of positive signals) but it will surely help you to improve your trading.*

Getting Alerts

If you find an interesting trade but don't want to stay all day in front of the computer looking for an entry opportunity, you can use our bonus indicator (called Macd Change Alerts).

--- Comment: If you didn't install this indicator, please add the indicator (macd_alerts_v1.ex4) to the "Indicators" folder (as you did with "The Trading Box" indicator) and then restart Metatrader -----

Once that the indicator is installed, just add it to your chart (you'll see it as "macd_alerts_v1") ...

... and you'll get an alert when the inner line changes its color.

After adding the indicator, you'll get an alert once the line changes its color (here, the alert appears once the line Changes from red to blue).

Final Considerations ...

Important Things Before You Start Trading.:

- 1) Always Practice with a "Demo" account without risking real money.*
- 2) Always Practice with a "Demo" account without risking real money.*
- 3) It's a Good Practice to Not Risk More than 2% of Your Capital Per Trade.*
- 4) Pay Attention to the Spread: Depending on the moment of the day and the selected Pair, the spread can be too high.*

This free indicator can help you to see the spread for any pair:

<https://www.mql5.com/es/market/product/5984>

5) Avoid Trading During News! There's a lot of Volatility during news.

If you want to see the events for the day, this page will help:

<https://www.dailyfx.com/calendar>

6) Always use a Stop Loss to protect your capital from crazy price movements that goes against the direction of your trade.

The Stop & Take Profit Level is something that depends on you, your capital, the size of your trade, the timeframe where you operate and your risk style.

7) Recommended Timeframes: You can use the indicator with any timeframe of your choice but it's recommended to use it with H1 timeframes (Hourly Timeframe) or higher.

That's All.
