Comments

1) Each Compression Will Have a Different Result Depending on Different Factors that Have to do with the Original File.

For example, if your video has been already compressed, then a new compression could make little or no difference.

2) In general, the compressed videos have almost no quality loss but video compression always comes with some quality reduction.

3) Video compression may take some time, depending on the size of the video. As a reference, a 100MB video may take from 10 minutes to 15 minutes to complete.

The software will let you know once the process is complete.

Tip: While the compression is running, you can this window under your taskbar...

By clicking it you can see the progress of see the progress of the current compression.

That's All!
